

Everything measured this session, on named axes

419 rated documents in grey. The twelve seeds with their mean edit vector and the attractor they point at. Right: two decoded starting points, three chains each, run to depth 3-5.

Working plane: caution x long term orientation
where the corpus spreads out, and where the measured drift is largest

Two starting points, run as chains
both begin at long-term 1 and differ only in caution

○ all 419 rated documents ○ seed — mean of six edits ● after one edit ★ attractor — chain from caution 5 — chain from caution 7
