

Everything measured this session, on named axes

446 rated documents in grey. Fourteen starting points with their mean edit vector, and the attractor they point at.
Twelve are published or researcher-written seeds, averaged over six edits; two are decoded, over three.

Working plane: caution x long term orientation
where the corpus spreads out, and where the measured drift is largest

Frontier plane: honesty strictness x long term orientation
where the whole corpus collapses into one corner

○ all 446 rated documents ○ seed — mean edit vector ● after one edit ★ attractor
